(54) IMAGE PROCESSING APPARATUS AND METHOD

(57)Abstract:

PROBLEM TO BE SOLVED: To output an image, from which the person who prepared the image, and the like, can be recognized.

SOLUTION: From a data inputted from a PDL data inputting part 102, file information is separated at a file information collecting part 103 so as to store in a file information storing part 104. A PDL interpreter produces an image memory. A ciphering/patterning processing part 106 selects necessary information from the file information and ciphers the same as needed, then converts the same to a pattern corresponding to the file information. The pattern is synthesized with image data stored in an image memory 107 and outputted.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's
decision of rejection]

[Date of requesting appeal against examiner's
decision of rejection]

[Date of extinction of right]
